Education

Massachusetts Institute of Technology – M.Eng. in Electrical Engineering and Computer Science Expected May 2027
Graduate Coursework: Deep Learning, TinyML and Efficient AI Computing, Machine Learning

Massachusetts Institute of Technology – B.S. in Artificial Intelligence and Decision Making | GPA: 4.7/5 May 2026

Experience

MIT Sports Lab, Research Assistant – Cambridge, MA July 2025 – Present

- Created a full curriculum for an online Sports Analytics course, guiding students through a cricket ML project predicting the outcome of the next over
- Designed and implemented all of the project's reference solutions using multiple machine learning models and established baseline predictors for benchmarking student performance
- Developed evaluation methods to compare student models against baselines and generate project scores for the course that launched this semester, with students now beginning the final project

PwC, AI and Decision Intelligence Intern – New York City, NY April 2026 – July 2026

- Built a client-facing AI pharmaceutical sales representative demo using the OpenAI and Cartesia APIs, reducing voice response latency from 600ms to 300ms to approximate the ~200ms turn-taking rhythm of natural conversation
- Designed and built an admin dashboard with conversation analytics and one-click outreach triggers, delivering functionality ahead of the production platform
- Executed FIT testing protocols and set up issue tracking for a RAG-based system, surfacing 3 critical defects resolved before client demonstrations

WonderBotz, Machine Learning Engineer Intern – Princeton, NJ June 2025 – Aug 2025

- Researched, evaluated, and benchmarked open-source machine learning models to identify scalable replacements for existing automation systems
- Designed and implemented a document processing solution through Azure that enhanced internal business automation workflows and reduced reliance on legacy tools
- Improved document data extraction accuracy by 15% through fine-tuning open-source visual language models on company datasets

Bokksu, Software Engineer Intern – Tokyo, Japan June 2024 – Aug 2024

- Analyzed 100,000+ e-commerce data points to optimize SEO keywords and boost search rankings
- Streamlined e-commerce operations by developing dynamic Shopify content blocks with HTML/CSS, enabling faster designer updates for seasonal campaigns
- Pioneered the integration of generative AI for marketing, producing new image and video assets that reduced reliance on external creative resources

Projects

NBA: Ball Touch Classification Feb 2025 – June 2025

- Collaborated in a 5-member research team to design and train a multimodal AI model leveraging video and accelerometer time-series data, achieving 80% accuracy in classifying hand touches
- Developed data preprocessing and feature extraction pipelines to integrate heterogeneous input sources, enabling robust classification across varied in-game scenarios
- Evaluated model performance through iterative tuning, providing actionable insights for future improvements

Skills

AI / Machine Learning: RAG, LLMs, Fine-Tuning, PyTorch, TensorFlow
Programming Languages: Python, C++, SQL, Java, JavaScript, R
Frameworks and Tools: React, Pandas, Git, Microsoft Azure, REST APIs
